

# HORIBA

Scientific

# Optical characterization of ITO films prepared in different atmospheres using Spectroscopic Ellipsometry

Celine Eypert, Assia Shagaleeva, Jean-Paul Gaston

HORIBA Scientific, Thin Film Division,  
Z.A. de la Vigne aux Loups, 5 avenue Arago  
91380 Chilly-Mazarin, France

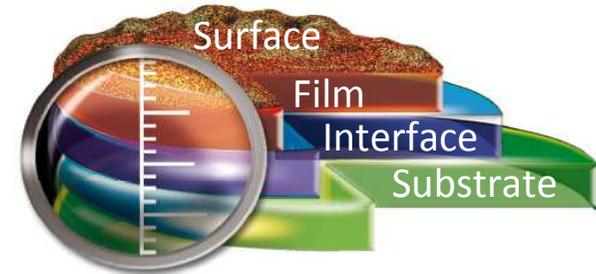

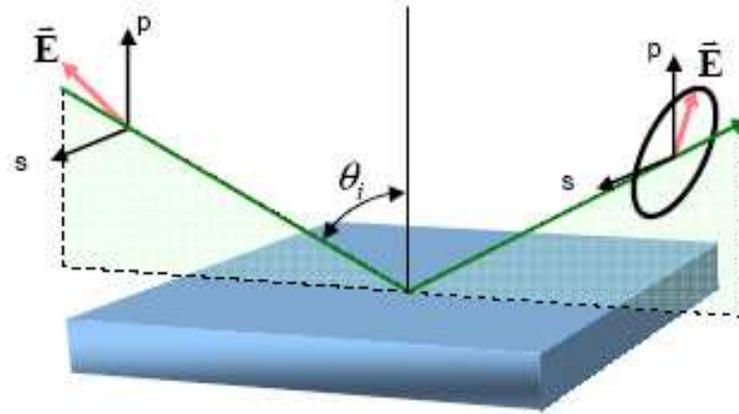

# Experimental

- Poster : sensitivity of SE on 4 ITO samples at different conditions
  
- ITO / c-Si samples
  - DC sputtering (Quorum K675XD)
  - Annealing at 500°C for 4 hours and cooled in various atmospheres,
    - Air
    - N2 (1 bar).
    - Vacuum (0.6 bar)
  
- Spectroscopic Ellipsometry over 190-2100nm
  - ITO Optical Constants
  - ITO Thicknesses

# Spectroscopic Ellipsometry Technique

- Non destructive optical technique to characterise thin films

$$\rho = \tan(\Psi) e^{i\Delta}$$

$$= \frac{E_p^{out} / E_p^{in}}{E_s^{out} / E_s^{in}} = \frac{\tilde{r}_p}{\tilde{r}_s} = \frac{|r_p|}{|r_s|} e^{i(\delta_p - \delta_s)}$$

$$\tan(\Psi) = \frac{|r_p|}{|r_s|}$$

$$\Delta = \delta_p - \delta_s$$

**Measurement of the changes in the polarization light by reflection from a surface**

# Spectroscopic Ellipsometry Technique

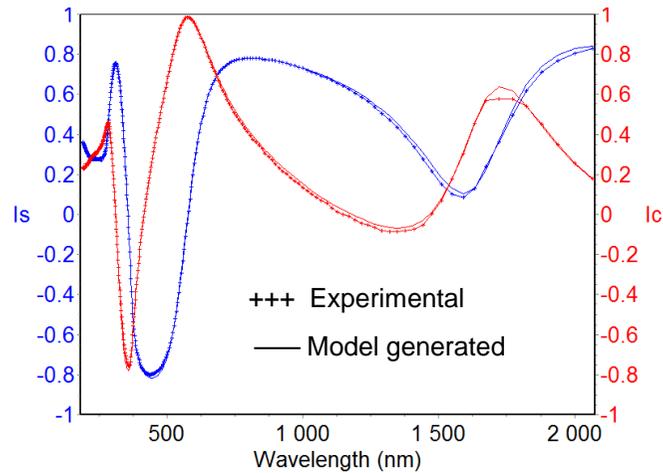

- Non-destructive & contactless technique
- Very sensitive, especially to ultra-thin films: < 10 nm
- No sample preparation
- Liquid or solid samples, transparent and semi-transparent materials
- Spectroscopic measurement: wide spectral range from FUV to NIR
- Multi-layer stacks
- Sample mapping
- Microspot optics for patterned samples
- In-situ real-time measurement: film growth, surface modification

# SE Results

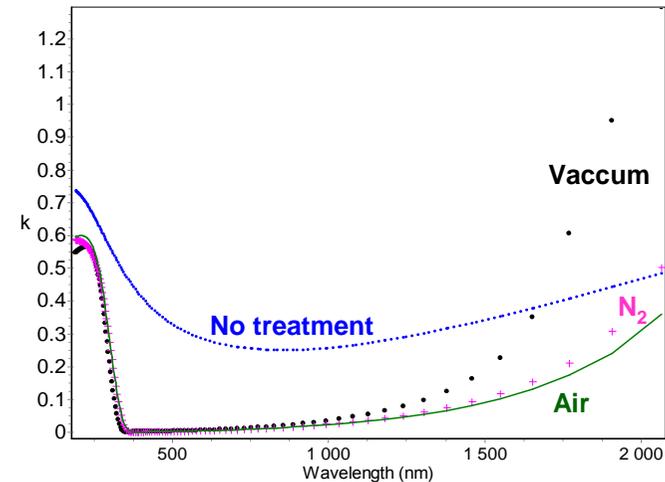

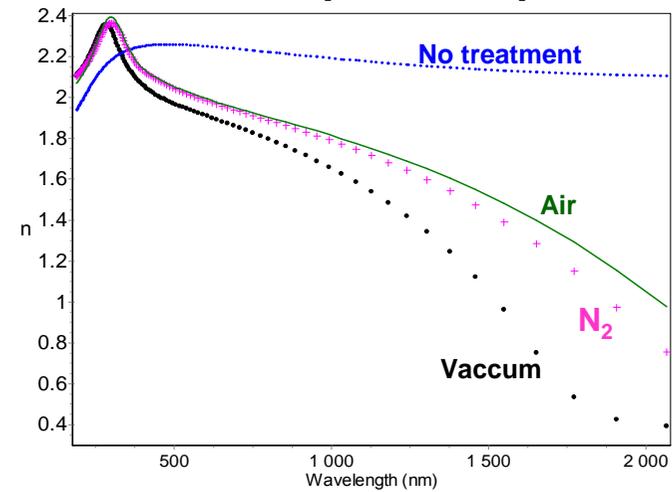

**Ellipsometry Fit Agreement**

(1-3nm) roughness  
(77-85nm) ITO + (n,k)  
c-Si

**Extracted Optical Properties**

The background is a solid blue color. In the top-left corner, there is a small globe of the Earth surrounded by three concentric white circles. At the bottom of the slide, there is a faint, light-colored illustration of a landscape. It shows a road with a car, trees, and a building, all rendered in a sketchy, dotted style.

Thank you
